

Q1:

Create a base class **Vehicle** with:

- Properties: make, model (as protected or private attributes with getters/setters using @property)
- A method **info()** returning a description.

Create a subclass **Car** that adds:

- Property: num_doors (validate: 2 or 4)
- Override **info()** to include doors.

Q2:

Create Employee class with:

- Private or protected attributes: name, salary
- Property salary with setter that ensures salary is non-negative.
- Method **annual_bonus()** returns 5% of salary.

Create **Manager** subclass that:

- Adds **team_size** property (must be ≥ 0)
- Overrides **annual_bonus()** $\rightarrow$ 10% of salary + \$500 per team member.
